LAB REPORT
On

OBJECT ORIENTED JAVA PROGRAMMING
(23CS3PCOOJ)

Submitted by

SAKSHI KALLUR
(USN-1BM22CS345)

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING
(Autonomous Institution under VTU)
BENGALURU-560019
Dec 2023- March 2024

B. M. S. College of Engineering,
Bull Temple Road, Bangalore 560019
(Affiliated To Visvesvaraya Technological University, Belgaum)
Department of Computer Science and Engineering

This is to certify that the Lab work entitled **"OBJECT ORIENTED JAVA PROGRAMMING"**carried out by **SAKSHI KALLUR (USN-1BM22CS345)**, who is bonafide student of **B. M. S. College of Engineering**. It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2023-24. The Lab report has been approved as it satisfies the academic requirements in respect of OOJ Lab - **(23CS3PCOOJ)**work prescribed for the said degree.

Prof. Shravya AR
Assistant Professor
Department of CSE
BMSCE, Bengaluru

Dr. Jyothi S Nayak
Professor and Head
Department of CSE
BMSCE, Bengaluru

INDEX:

6.	Create a package CIE which has two classes- Student and Internals. The class Personal has members like usn, name, sem. The class internals has an array that stores the internal marks scored in five courses of the current semester of the student. Create another package SEE which has the class External which is a derived class of Student. This class has an array that stores the SEE marks scored in five courses of the current semester of the student. Import the two packages in a file that declares the final marks of n students in all five courses.
7.	Write a program that demonstrates handling of exceptions in inheritance tree. Create a base class called “Father” and derived class called “Son” which extends the base class. In Father class, implement a constructor which takes the age and throws the exception WrongAge( ) when the input age<0. In Son class, implement a constructor that cases both father and son’s age and throws an exception if son’s age is >=father’s age.
8.	Write a program which creates two threads, one thread displaying “BMS College of Engineering” once every ten seconds and another displaying “CSE” once every two seconds.

LAB PROGRAM-1

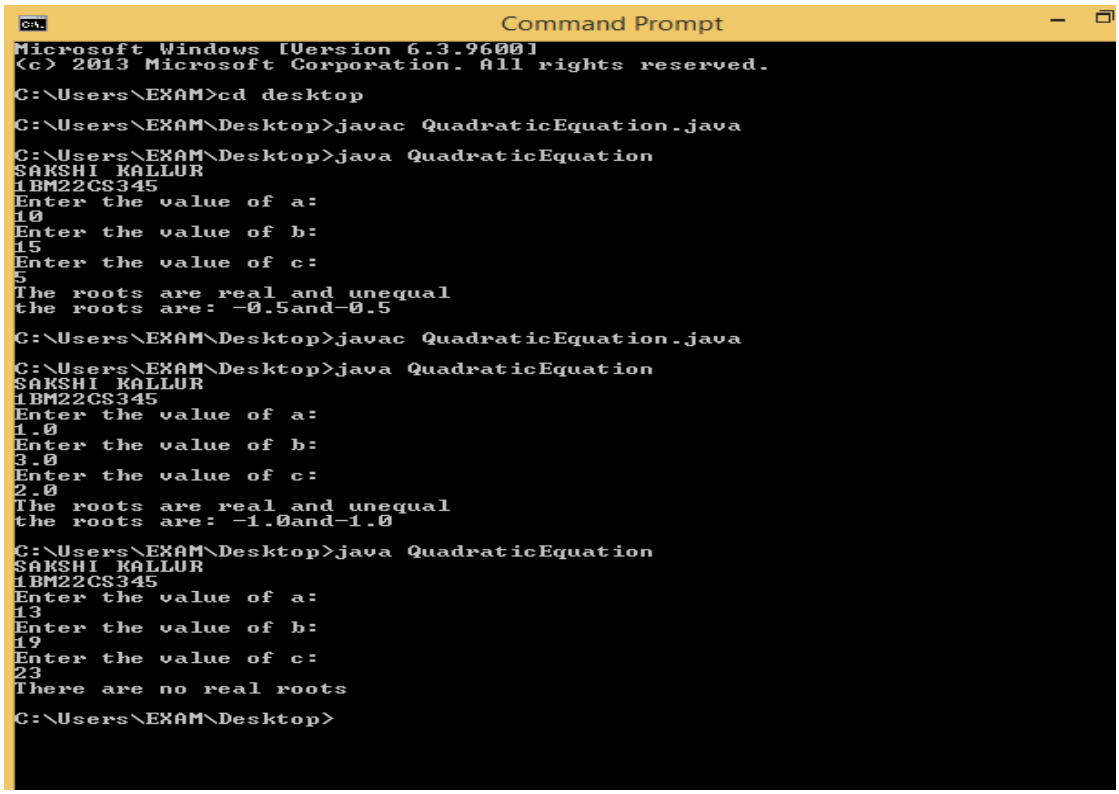
Develop a Java program that prints all real solutions to the quadratic equation ax2+bx+c = 0. Read in a, b, c and use the quadratic formula. If the discriminate b2-4ac is negative, display a message stating that there are no real solutions.

CODE:

```
import java.util.*;
import java.lang.Math;
class Quadratic{
float a,b,c,d;
double  r1,r2;
void getd(){
Scanner in=new Scanner(System.in);
System.out.println("Enter value of a:");
a=in.nextFloat();
System.out.println("Enter value of b:");
b=in.nextFloat();
System.out.println("Enter value of c:");
c=in.nextFloat();
}
void display(){
d=(b*b)-(4*a*c);
if(d==0.0){
System.out.println("The roots are real and equal.");
r1=(float)(-b+Math.sqrt(d))/(2*a);
System.out.println("The roots are :"+r1+" and "+r1);
}
else if(d>0.0){
r1=(float)(-b+Math.sqrt(d))/(2*a);
r2=(float)(-b-Math.sqrt(d))/(2*a);
System.out.println("The roots are real and unequal.");
System.out.println("The roots are :"+r1+" and "+r2);
}
else{
```

```
System.out.println("There are no real roots");}
}
}
class Quadraticequation
{
public static void main(String args[])
{
System.out.println("SAKSHI KALLUR");
System.out.println("1BM22CS345");
Quadratic q=new Quadratic();
q.getd();
q.display();
}}
```

OUTPUT:



LAB PROGRAM-2

Write a Java program to create a class Student with members USN, name, marks(6 subjects). Include methods to accept student details and marks, Also include a method to calculate the percentage and display appropriate details. (Array of student object to be created)

CODE:

```
import java.util.*;

class Student{

int usn;

String name=new String();

double marks[]=new double[6];

double ind_tot=0.0,percentage;

void getd(){

Scanner in=new Scanner(System.in);

System.out.println("Enter USN:");

usn=in.nextInt();

System.out.println("Enter name:");

name=in.next();

System.out.println("Enter subject marks(out of 100):");

for(int i=0;i<=5;i++){

System.out.println("Enter marks of subject "+(i+1)+":");

marks[i]=in.nextDouble();

}

}

double percen(){

double total=600.0;

for(int i=0;i<6;i++){

ind_tot=ind_tot+marks[i];

}

return ((ind_tot/total)*100);

}
```

```
void display(){
System.out.println("usn:"+usn);
System.out.println("name:"+name);
}
}

class Student_info
{
public static void main(String args[])
{
int n;
System.out.println("SAKSHI KALLUR");
System.out.println("1BM22CS345");
Scanner input=new Scanner(System.in);
System.out.println("Enter number of students");
n=input.nextInt();
Student s[]=new Student[n];

for(int i=0;i<n;i++){
s[i]=new Student();
s[i].getd();
}

for(int i=0;i<n;i++){
System.out.println("details of student "+(i+1)+" are :");
s[i].display();
double c=s[i].percen();
System.out.println("Total percentage in all subjects:"+c);
}
}
}
```

OUTPUT:

```

LAB PROGRAM-3:

Create a class Book that contains four members: name, author, price, and num_pages. Include a constructor to set the values for the members. Include methods to set and get the details of the objects. Include a toString( ) method that could display the complete details of the book. Develop a Java program to create n book objects.

CODE:

```
import java.util.*;
class Books{
int num_pages;
String name=new String();
String author=new String();
float price;
Books(){}
Books(String name,String author,float price,int num_pages){
this.name=name;
this.author=author;
this.price=price;
this.num_pages=num_pages;
}
public String toString(){
String a,b,c,d;
a = "Book name: " + this.name + "\n";

b="Book author: "+ this.author + "\n";
c="Book price:"+this.price+"\n";
d="Number of pages:"+this.num_pages+ "\n";
return a+b+c+d;
}
}
class Books_info_1{
public static void main(String args[])
{
```

```
int n,num_pages;
String name=new String();
String author=new String();
float price;
System.out.println(“SAKSHI KALLUR ");
System.out.println("1BM22CS345");
Scanner in=new Scanner(System.in);
System.out.println("Enter number of Books");
n=in.nextInt();
Books b[]=new Books[n];

for(int i=0;i<n;i++){
System.out.println("enter details of book "+(i+1)+":");
System.out.println("Enter book title:");
name=in.next();
System.out.println("Enter book author");
author=in.next();
System.out.println("Enter book price:");

LAB PROGRAM 4:

Develop a Java program to create an abstract class named Shape that contains two integers and an empty method named printArea( ). Provide three classes named Rectangle, Triangle and Circle such that each one of the classes extends the class Shape. Each one of the classes contain the method printArea( ) that prints the area of the given shape.

CODE:

```
import java.util.*;
abstract class Shape{
 int a,b;
 abstract void printArea();}

class Rectangle extends Shape{
 void printArea(){
  System.out.println("area of rectangle: " +(a*b)+"\n");}}

class Triangle extends Shape{
 void printArea(){
  System.out.println("Area of Triangle: "+(0.5*a*b)+"\n");}}

class Circle extends Shape{
 void printArea(){
  System.out.println("Area of Circle: "+(3.142*a*a)+"\n");}}

class AbstractExample
{
 public static void main(String args[])
{
 System.out.println("SAKSHI KALLUR");
 System.out.println("1BM22CS345");
 Scanner in = new Scanner(System.in);
```

```
 Rectangle r = new Rectangle();
 Triangle t = new Triangle();
 Circle c = new Circle();
 System.out.println("Enter length and breadth of rectangle: ");
 r.a = in.nextInt();
 r.b = in.nextInt();
 r.printArea();

System.out.println("Enter height and base of triangle: ");
 t.a = in.nextInt();
 t.b = in.nextInt();
 t.printArea();

System.out.println("Enter radius of the circle: ");
 c.a = in.nextInt();
 c.printArea();
}
}
```

OUTPUT:

Enter height and base of triangle:
5
6
Area of Triangle: 15.0

Enter radius of the circle:
4
Area of Circle: 50.272
```

LAB PROGRAM 5:

1. Develop a Java program to create a class Bank that maintains two kinds of account for its customers, one called savings account and the other current account. The savings account provides compound interest and withdrawal facilities but no cheque book facility. The current account provides cheque book facility but no interest. Current account holders should also maintain a minimum balance and if the balance falls below this level, a service charge is imposed.
   Create a class Account that stores customer name, account number and type of account. From this derive the classes Cur-acct and Sav-acct to make them more specific to their requirements. Include the necessary methods in order to achieve the following tasks:

   a) Accept deposit from customer and update the balance.
   b) Display the balance.
   c) Compute and deposit interest
   d) Permit withdrawal and update the balance

   Check for the minimum balance, impose penalty if necessary and update the balance.

CODE:

```
import java.util.Scanner;

class Account

{

public static  int min=500;

String name;

int Account_num;

public float o_Price;

Scanner sc=new Scanner(System.in);

public void get_info()

{

System.out.println("Enter Name:");

name=sc.nextLine();

System.out.println("Enter Account Number:");

Account_num=sc.nextInt();

System.out.println("Enter opening Ammount ,must be >500:");

o_Price=sc.nextFloat();

if(o_Price <500)

{

System.out.println("Enter opening Ammount,must be >500:");

} }
```

```
public void show()
{
System.out.println("Name:"+name);
System.out.println("Account_number:"+Account_num);
System.out.println("Ammount:"+o_Price);
}
}
class  Current  extends Account
{
float deposit,withdraw,penality;
public void deposit()

LAB PROGRAM 6:

Package program

Create a package CIE which has two classes- Student and Internals. The class Student has members like usn, name, sem. The class internals derived from student has an array that stores the internal marks scored in five courses of the current semester of the student. Create another package SEE which has the class External which is a derived class of Student. This class has an array that stores the SEE marks scored in five courses of the current semester of the student. Import the two packages in a file that declares the final marks of n students in all five courses.

1. Create a folder CIE and save the programs Student.java and Internals.java within it.

2. Create a folder SEE and save the program External.java within it.

3. Save the Main program outside these two folders.

4. Compile Main.java and Execute the Main.class

CODE:

Student.java

```
package CIE;

public class Student {

public String usn,name;

public int sem;

public Student(String usn, String name, int sem) {

this.usn=usn;

this.name=name;

this.sem=sem;

}

}
```

Internals.java

```
package CIE;

public class Internals extends Student {

public int[] internalMarks;

public Internals(String usn, String name, int sem, int[] internalMarks) {

super(usn, name, sem);

this.internalMarks = internalMarks;

}

}
```

External.java

```
package SEE;
import CIE.Student;
public class External extends Student {
public int[] seeMarks;
public External(String usn, String name, int sem, int[] seeMarks) {
super(usn, name, sem);
this.seeMarks = seeMarks;
}
}
```

FinalMarks.java

```
import CIE.Internals;
import SEE.External;
import java.util.Scanner;
public class FinalMarks {
public static void main(String[] args) {
Scanner scanner = new Scanner(System.in);
System.out.print("Enter the number of students: ");
int n = scanner.nextInt();
Internals[] cieStudents = new Internals[n];
External[] seeStudents = new External[n];
// Input CIE marks
for (int i = 0; i < n; i++) {
System.out.println("Enter details for CIE of student " + (i + 1));
System.out.print("USN: ");
String usn = scanner.next();
System.out.print("Name: ");
String name = scanner.next();
System.out.print("Semester: ");
int sem = scanner.nextInt();
```

```
int[] cieMarks = new int[5];
System.out.print("Enter CIE marks for 5 courses: ");
for (int j = 0; j < 5; j++) {
cieMarks[j] = scanner.nextInt();
}
cieStudents[i] = new Internals(usn, name, sem, cieMarks);
}

// Input SEE marks
for (int i = 0; i < n; i++) {
System.out.println("Enter details for SEE of student " + (i + 1));
System.out.print("USN: ");
String usn = scanner.next();
System.out.print("Name: ");
String name = scanner.next();
System.out.print("Semester: ");
int sem = scanner.nextInt();

LAB PROGRAM 7:

Write a program that demonstrates handling of exceptions in inheritance tree. Create a base class called “Father” and derived class called “Son” which extends the base class. In Father class, implement a constructor which takes the age and throws the exception WrongAge( ) when the input age<0. In Son class, implement a constructor that cases both father and son’s age and throws an exception if son’s age is >=father’s age.

CODE:

```
import java.util.*;
class WrongAge extends Exception{
public WrongAge(String str){
super(str);}
}
class father{
int f_age;
father(int age) throws WrongAge{
f_age=age;
if(age<=0){
throw new WrongAge("age must be above 0");
}}}
class son extends father{
int s_age;
son(int age,int fage) throws WrongAge{
super(fage);
s_age=age;
if(s_age>=fage){
throw new WrongAge("age must be lesser than fathers age");
}
}
}
class father_son_exception{
public static void main(String args[]){
System.out.println("SAKSHI KALLUR");
System.out.println("1BM22CS345");
int f_age,s_age;
```

```
Scanner in=new Scanner(System.in);
System.out.println("enter father's age");
f_age=in.nextInt();
try{
father f=new father(f_age);
}

LAB PROGRAM 8:

Write a program which creates two threads, one thread displaying “BMS College of Engineering” once every ten seconds and another displaying “CSE” once every two seconds.

CODE:

```
class bms extends Thread{
public void run(){
try{
for(int i=0;i<10;i++){
System.out.println("BMS COLLEGE OF ENGINEERING");
Thread.sleep(2000);
}
}
catch(InterruptedException e)
{
System.out.println("Exception handled");
}
}
}
class cse extends Thread{
public void run(){
try{
for(int i=0;i<10;i++){
System.out.println("CSE");
Thread.sleep(10000);
}
}
catch(InterruptedException e){
System.out.println("ENDED");}
{
System.out.println("Exception handled");
}
}
}
```

```
class Thread_college{
public static void main(String args[]){
System.out.println("SAKSHI KALLUR");
System.out.println("1BM22CS345");
bms b=new bms();
cse c=new cse();
c.start();
b.start();
try{
b.join();
c.join();}
catch(InterruptedException e)
{
System.out.println("Exception handled");
}
{
System.out.println("ENDED");
}}}
```

OUTPUT:

```
